DETAILED ACTION

1. This office action is in response to amendment filed on March 06, 2006.
2. Claims 1, 3-10, 12, and 14-16 have been amended.
3. Claim 18 has been canceled.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-6, 9-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Kawade et al. (6,181,805).

Regarding claims 1-3, 6, 9-17, Kawade discloses an image creating apparatus, comprising:

detecting a position of a body part area in an input image (see fig.1, elements 4-6 and its description);

locating a coordinate system of an ornament according to the detected position of the body part area in the input image (see figs.1-2, elements 2, 11 and its description); and

outputting an ornament-arranged input image, based on the located coordinate system of the ornament image (see fig.1, element 7 and its description).

Regarding claims 4-5, Kawade further the ornament image and the input image are related by using a meta-file (see figs.1-2, element 11 and its description).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawade et al. (6,181,805) in view of Koike et al. (6,181,805).

Regarding claims 7-8, Kawade discloses detecting a size of a body part area in an input image Koike discloses object image detecting method, comprising: detecting a of a body part area (see fig.1, elements 4-6 and its description); defining a coordinate system of an ornament (see figs.1-2, elements 2, 11 and its description); and outputting an ornament-arranged input image, based on the defined the coordinate system of the ornament (see fig.1, element 7 and its description), except for a rotation. However, Koike discloses object image detecting method, comprising: a rotation (see fig.2, fig.7, and its description). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the Koile's rotation method in Kawade's invention in order to improve the technique of creating image systems.
